

# BRENT BARTOSCH

GTM Engineer | AI Systems Architect | Growth Infrastructure

Los Angeles, CA · 310-743-3616 · brent.bartosch@gmail.com · linkedin.com/in/brent-bartosch · github.com/brent-bartosch

---

GTM engineer and AI systems architect with 7+ years of enterprise SaaS sales (Skai, Conversion Logic) and 3+ years building production-grade AI infrastructure that collapses what typically requires 3–5 specialists into a single operator. I don't assemble no-code stacks—I build custom TypeScript and Python pipelines using Claude Code, Supabase, and direct API integrations that automate research, outbound personalization, campaign execution, CRM sync, and analytics at scale. My enterprise sales background means every system I architect maps to pipeline, revenue, and the messy middle between top-of-funnel and closed-won.

## CORE CAPABILITIES

---

**AI GTM Systems:** End-to-end workflow architecture • Autonomous outbound engines • Programmatic SEO • LLM-powered content generation • Multi-agent orchestration with guardrails and drift prevention

**Demand Gen & Paid Media:** Google Ads management & optimization • Keyword strategy • Campaign architecture • Bid management • CPL/CAC analysis • GA4 • Google Search Console

**Infrastructure & Stack:** Claude Code • TypeScript • Python • Supabase/Postgres • BigQuery • Vercel • Smartlead API • OAuth/REST integrations • Linear • Notion

**Enterprise Sales:** Full-cycle B2B SaaS • MEDDPICC • Champion mapping • Technical discovery • Procurement navigation • Expansion/renewal

## PROFESSIONAL EXPERIENCE

---

**SMOOTHED.IO — Founder & Principal GTM Engineer** Dec 2022 – Present

*GTM engineering consultancy serving B2B SaaS and e-commerce clients with AI-powered growth infrastructure*

- **Architected autonomous outbound engine** managing 150+ mailboxes across Smartlead, automating the full pipeline from list building → enrichment → personalization → send → reply handling → CRM sync. Reduced campaign launch time from ~8 hours to ~3 minutes.
- Built production **programmatic SEO platform** (“The War Machine”) functioning as an autonomous competitive intelligence engine—connecting Google Ads keyword performance to automated content generation, creating an infinite feedback loop between paid search signals and organic content strategy.
- **Audited and restructured Google Ads** for a FedRAMP-authorized AI platform (DoD/GovTech), uncovering \$81K in misdirected spend and a critical negative keyword that was blocking core ICP searches. Rebuilt campaign architecture from the ground up.
- Designed and shipped an **executive analytics dashboard** integrating GA4, Google Ads, and Google Search Console into BigQuery via Looker Studio—giving leadership a single-pane view of full-funnel marketing performance.
- Built **corpus enrichment pipeline** (998 lines, 27 passing tests) connecting Google Ads keyword data to backend knowledge bases for AI-driven content targeting.
- **Reduced client acquisition costs by ~90%** by engineering multi-source data pipelines with automated qualification, enrichment, and routing.
- Developed **queue-based state machine architecture** with concurrent processing, checkpoint/resume recovery, stall detection, and auto-retry—built for crash-safe reliability across all automation workflows.
- Created custom **risk assessment protocols** (pre-mortem analysis, assumption extraction, cascading business impact analysis, quantitative scenario modeling) that improved AI development success rates by catching failure points before build.

## **SKAI (fka Kenshoo) — Sales Director** June 2020 – July 2022

*Enterprise predictive marketing intelligence platform*

- Partnered with technical teams on custom API integrations for marquee accounts including HBO Max (\$800K ACV).
- Managed enterprise compliance workflows involving PII, CCPA, and GDPR across complex multi-stakeholder deals.
- Deep exposure to paid search operations at scale—observed and contributed to campaign architecture, bid strategy, and performance optimization across the client portfolio.

## **CONVERSION LOGIC — Enterprise Account Executive** Sept 2017 – June 2020

*Multi-touch attribution and marketing data platform*

- Led application integration projects collaborating with Data Science and Engineering to design solution architectures for enterprise attribution modeling.
- Established integration standards for data ingestion workflows supporting complex marketing data pipelines.

## **CREALYTICS — Enterprise Account Executive** July 2022 – Dec 2022

*Predictive marketing intelligence for retail*

- Managed complex enterprise integrations and facilitated SOC 2 compliance processes for predictive marketing intelligence platform.

## **SELECTED AI SYSTEMS & TECHNICAL WORK**

---

- **Autonomous outbound infrastructure:** Multi-source collection → LLM-powered enrichment → automated qualification → personalized outreach → reply classification → CRM graduation → multi-touch attribution. Fully event-driven via webhooks and database triggers.
- **Signals pipeline generator:** Reddit/HN/Twitter/GitHub scrapers with Supabase Edge Functions, pg\_cron scheduling (4-hour cycles), deduplicated storage, and Slack alerts. ~1,100 daily signals captured with automated LLM tiering, company extraction, and lead creation.
- **API integration toolkit:** 34+ production methods with rate limiting, retry logic, exponential backoff, and comprehensive error handling supporting reliable automation at scale.
- **Cold email deliverability infrastructure:** 150+ managed mailboxes across Outlook and Gmail with automated warmup, rotation, and reputation monitoring via Smartlead API.

## **EDUCATION & CERTIFICATIONS**

---

- Bachelor of Arts, Business Administration — Loyola Marymount University
- AWS Certified Cloud Practitioner (2023)
- MEDDPICC Masterclass Certification (2023)
