SUMMARY

GTM Engineer with 7+ years of enterprise SaaS revenue experience and hands-on engineering depth across Python, TypeScript, SQL, APIs, webhooks, LLM workflows, and product-signal automation. I build the systems that turn inbound and product-driven signals into qualified, routed, sales-ready pipeline - capturing demand, defining sales-worthy intent, enriching and scoring leads, and delivering decision-ready context to sellers within minutes. Quota-carrying revenue background combined with production GTM infrastructure, with every system instrumented for cost, conversion, and revenue visibility.

SELECTED GTM SYSTEMS BUILT

- **Product-led lead routing:** Built an 8-stage trial-conversion pipeline taking a raw free-trial signup to a scored, routed, sales-ready opportunity in under 90 seconds - intake validation, AI enrichment, Mixpanel product-signal extraction, hybrid ICP scoring, deterministic routing (ICP tier × engagement → sales motion), and AI dossier generation so reps receive decision-ready context, not just lead objects. End-to-end cost under \$0.04/lead.
- **Inbound signal capture & routing:** Built a multi-source buying-signal pipeline (Reddit, Hacker News, X, GitHub) capturing ~1,100 signals/day into Supabase Edge Functions / pg_cron, with LLM tiering, deterministic qualification, and human-in-the-loop Slack routing for Tier-1 intent under a 4-hour SLA.
- **Revenue automation at scale:** Built an autonomous outbound and enrichment engine across 150+ mailboxes - list build, qualification, personalization, sequencing, reply handling, and CRM sync; reduced campaign launch from ~8 hours to ~3 minutes and client CAC by ~90%.
- **CRM object modeling & integration:** Shipped production CRM integrations modeling Leads, Opportunities, Tasks, and custom objects across Close (API + webhooks), Day.ai (OAuth 2.0 + MCP), Twenty (GraphQL), and HubSpot - routing logic and object design, not form-building.
- **Behavioral & product data:** Operationalized product-usage and behavioral event data (Mixpanel, PostHog, BigQuery) into GTM scoring and routing workflows.
- **Architecture discipline:** Separated deterministic logic from LLM judgment for routing, scoring, and validation; confidence scoring and independent AI quality gates at every stage - legible, auditable systems built to scale.

PROFESSIONAL EXPERIENCE

Founder & Principal GTM Engineer

Dec 2022 – Present

[Smoothed.io](https://smoothed.io) | Los Angeles, CA

GTM engineering consultancy building revenue automation across inbound intake, product-signal scoring, enrichment, outbound, CRM workflows, analytics, and AI-assisted personalization for B2B SaaS and e-commerce clients.

- Built an 8-stage product-led trial-conversion engine for a B2B SaaS client: raw trial signup → AI enrichment → Mixpanel product-signal extraction → hybrid ICP scoring → deterministic routing (ICP tier × engagement → sales motion) → AI lead-dossier + first-touch email → independent AI quality gate; signup to scored, routed, sales-ready opportunity in under 90 seconds at under \$0.04/lead.
- Built a multi-source buying-signal pipeline (Reddit, Hacker News, X, GitHub) capturing ~1,100 signals/day into Supabase Edge Functions / pg_cron with LLM tiering, deterministic qualification scoring, and Slack-based human-in-the-loop routing for Tier-1 intent (<4hr SLA).
- Architected an autonomous outbound and enrichment engine managing 150+ mailboxes via Smartlead API; full workflow from list build and qualification to personalization, sequencing, reply capture, and CRM handoff - launch time ~8 hours → ~3 minutes.
- Reduced client CAC by ~90% through multi-source data pipelines with automated qualification, enrichment, routing, and CRM handoff across Close, Day.ai, Twenty, and HubSpot.
- Operationalized product-usage and behavioral data (Mixpanel, PostHog) and warehouse event data (BigQuery) into GTM scoring and routing workflows.
- Designed a queue-based state-machine architecture with concurrent processing, checkpoint/resume recovery, stall detection, exponential backoff, retries, and failure handling - crash-safe across all workflows.
- Separated deterministic logic from LLM judgment for routing, scoring, validation, and subjective classification; reduced hallucination risk and cost while preserving automation speed.

Contract GTM Engineer

2026 – Present

[GovSignals](https://govsignals.com) | Remote

FedRAMP-authorized AI platform for government contractors. Embedded as sole GTM engineer across analytics infrastructure, paid acquisition, and data pipelines.

- Audited Google Ads and uncovered \$81K in misdirected spend plus a critical negative keyword blocking core-ICP searches; rebuilt campaign architecture from scratch.
- Built a custom executive-facing revenue analytics app in Vercel after Looker Studio proved too generic; integrated GA4, Google Ads, and Google Search Console for campaign performance, attribution, and full-funnel decision-making, with a BigQuery query layer correlating ad performance to pipeline.
- Built a corpus enrichment pipeline (998 lines, 27 passing tests) connecting keyword data to backend knowledge bases using embeddings, chunking strategy, retrieval evaluation, and quality gates.

Vice President of Sales

Jul 2022 – Feb 2023

Crealytics | Los Angeles, CA

Predictive marketing intelligence platform and retail media SSP. Laid off due to company restructuring.

- Closed 2 full-service clients accounting for \$1.45M total revenue in first 5 months.
- Restructured outbound motion into an ABM approach, improving reply rate by +157%; hired and onboarded a BDR.

Sales Director

Jun 2020 – Jul 2022

Skai (FKA Kenshoo) | Los Angeles, CA

Enterprise predictive marketing intelligence platform.

- Exceeded quota: 143% Year 1, 111% Year 2; managed full-cycle enterprise sales with complex buying committees.
- Closed the company's largest app sale: HBO Max at \$800K ACV; partnered with solutions architects and TAMs on custom API integrations and technical discovery.
- Managed enterprise compliance workflows involving PII, CCPA, and GDPR, translating buyer requirements into technical and operational next steps.

Enterprise Account Executive / Team Lead, SDRs

Sep 2017 – Jun 2020

Conversion Logic | Los Angeles, CA

Multi-touch attribution and marketing data platform.

- Closed 2 accounts in first 60 days (\$390K ARR); contributed to a 31% increase in total ARR during tenure.
- Partnered with Marketing, Data Science, and Engineering on attribution modeling integrations, data-ingestion standards, and enterprise analytics requirements.
- Oversaw 2 SDRs and improved MQL generation by +67% in Year 1.

TECHNICAL STACK

Languages: SQL, Python, TypeScript, Node.js

GTM / RevOps: HubSpot, Smartlead, Clay, Mixpanel, PostHog, Google Ads API, GA4, Google Search Console, SEMrush, Slack, custom internal tools

Data / Infra: Supabase, PostgreSQL, pgvector, BigQuery, Railway (compute, cron jobs, background workers), Vercel, Supabase Edge Functions, pg_cron, OAuth, REST & GraphQL APIs, webhooks, database triggers, event streams

AI / Automation: Claude API, OpenRouter, RAG pipelines, embeddings, vector retrieval, prompt workflows, evals, observability, output validation, deterministic scoring & routing

EDUCATION & CERTIFICATIONS

BA, Business Administration - Loyola Marymount University • AWS Certified Cloud Practitioner (2023) • MEDDPICC Masterclass Certification (2023)
