

BRENT BARTOSCH

Growth Engineer | GTM Data Infrastructure · Revenue Automation | AI-Native

+1-310-743-3616 • brent.bartosch@gmail.com • Los Angeles, CA • linkedin.com/in/brent-bartosch • github.com/brent-bartosch • smoothed.io

SUMMARY

Growth engineer who builds the GTM data infrastructure and revenue automation behind pipeline: intent-signal ingestion, enrichment, propensity/ICP scoring, account routing and orchestration, outbound automation, and attribution, all as production systems. Seven years carrying enterprise SaaS revenue - with PII/CCPA/GDPR compliance in the deal cycle - means I design for how sales and marketing actually operate; three years building on Python, TypeScript, PostgreSQL/Supabase, BigQuery, and the Anthropic Claude API means I ship it. I architect for scale and reliability - queue-based state machines, event-driven pipelines, circuit breakers, dead-letter queues, and independent quality gates - and instrument every system for conversion, cost, and revenue. Comfortable in regulated, high-trust environments, from FedRAMP-platform GTM to financial-workflow migrations.

~90% client CAC reduction · trial signup → sales-ready in <90s at <\$0.04/lead · ~1,100 intent signals/day ingested & scored · 175+ mailboxes orchestrated, launch ~8h → ~3min

PROFESSIONAL EXPERIENCE

Founder & Principal Growth / GTM Engineer

Dec 2022 – Present

Smoothed.io | Los Angeles, CA - GTM engineering consultancy building revenue automation and GTM data infrastructure - intent-signal pipelines, enrichment, scoring, routing, CRM integration, outbound, and analytics - for B2B SaaS and e-commerce clients; Python/TypeScript on Supabase, PostgreSQL, and BigQuery.

- Intent-signal ingestion & propensity scoring: built a multi-source buying-signal pipeline (Reddit, Hacker News, X, GitHub) ingesting ~1,100 signals/day into Supabase Edge Functions / pg_cron, with LLM tiering, deterministic qualification scoring, and human-in-the-loop Slack routing for Tier-1 intent (<4hr SLA).
- Account prioritization, routing & orchestration: built an 8-stage trial-conversion engine - intake validation → AI enrichment → Mixpanel product-signal extraction → hybrid ICP scoring → deterministic routing engine (ICP tier × engagement → sales motion) → AI dossier + first-touch email → independent AI quality gate; signup to sales-ready in under 90 seconds at under \$0.04/lead.
- Outbound & campaign infrastructure: architected an autonomous outbound + enrichment engine across 175+ mailboxes with a daily health-monitoring cron (3-tier traffic-light, auto-pause on burned domains) - list build → enrichment → personalization → sequencing → reply handling → CRM sync; 5-20K leads/campaign, 20-50 campaigns/week; launch ~8 hours → ~3 minutes; ~90% client CAC reduction.
- CRM integration & object modeling: shipped production CRM integrations modeling Leads, Opportunities, Tasks, and custom objects across Close (API + webhooks), Day.ai (OAuth 2.0 + MCP), Twenty (GraphQL), and HubSpot - routing logic and object design across the stack, not form-building.
- Attribution & data-warehouse pipelines: built a Shopify → Klaviyo attribution system (order webhook → Supabase matching → AI disambiguation with confidence scoring, days-to-conversion, UTM tracking) and operationalized product/behavioral event data (Mixpanel, PostHog, BigQuery) into GTM scoring and routing.
- BDR/AE productivity tooling: built internal tools the growth team runs on - a customer portal (Next.js, shadcn/ui, Supabase Auth + RLS) with real-time lead table, email-thread modal, and activity logging, and an evaluation tool auto-scanning 45+ company portals (Greenhouse, Ashby, Lever, Workable) with parallel multi-agent scoring and a Go TUI dashboard.
- AI-native structured-data tooling: built a production API toolkit wrapping 10+ services (Supabase, Smartlead, BrightData, Shopify) with retry/backoff, rate limiting, and an auto-paginating query builder - ~500-1,000 tokens per service vs. ~90K for equivalent MCP - plus MCP servers and SDK-style wrappers exposing clean, structured interfaces for LLM and developer consumption.
- Systems architecture & governance: designed queue-based state-machine architecture with concurrent processing, checkpoint/resume, stall detection, exponential backoff, dead-letter queues, and 27 passing tests - crash-safe across workflows; separated deterministic logic from LLM judgment with independent quality gates. Codified it in a development-governance framework: a 9-technique risk-analysis pipeline and an architecture-decision-record standard across 11 domains gated by a Prototype/Production/Critical tier system.

Contract GTM / Growth Engineer

2026 – Present

GovSignals | Remote - FedRAMP-authorized AI platform for government contractors; embedded as sole growth and analytics engineer in a regulated, high-trust environment.

- Built GTM data pipelines feeding an executive revenue-analytics app (Next.js / React / Recharts on Vercel) - integrating GA4, Google Ads, and Search Console into a BigQuery query layer correlating ad spend to pipeline.
- Audited Google Ads and surfaced \$81K in misdirected spend plus a negative-keyword gap blocking core-ICP searches; rebuilt campaign architecture from scratch.

- Built a corpus-enrichment pipeline (998 lines, 27 passing tests) connecting keyword data to backend knowledge bases via embeddings, chunking strategy, retrieval evaluation, and quality gates.

Vice President of Sales

Jul 2022 – Feb 2023

Crealytics | Los Angeles, CA - Predictive marketing intelligence platform and retail-media SSP. (Laid off in company restructuring.)

- Closed 2 full-service clients accounting for \$1.45M total revenue in first 5 months.
- Restructured outbound into an ABM motion, improving reply rate by +157%; hired and onboarded a BDR.

Sales Director

Jun 2020 – Jul 2022

Skai (FKA Kenshoo) | Los Angeles, CA - Enterprise predictive marketing intelligence platform.

- Exceeded quota: 143% Year 1, 111% Year 2; ran full-cycle enterprise sales with complex buying committees.
- Closed the company's largest app sale - HBO Max at \$800K ACV - partnering with solutions architects and TAMs on custom API integrations.
- Managed enterprise compliance workflows involving PII, CCPA, and GDPR, translating buyer requirements into technical and operational next steps.

Enterprise Account Executive / Team Lead, SDRs

Sep 2017 – Jun 2020

Conversion Logic | Los Angeles, CA - Multi-touch attribution and marketing-data platform.

- Closed 2 accounts in first 60 days (\$390K ARR); contributed to a 31% increase in total ARR during tenure.
- Partnered with Marketing, Data Science, and Engineering on attribution-modeling integrations and data-ingestion standards; oversaw 2 SDRs and improved MQL generation by +67% in Year 1.

TECHNICAL STACK

- **Languages:** Python, TypeScript, Node.js, SQL (advanced PostgreSQL), JavaScript, Go
- **Data / Infra:** PostgreSQL, Supabase (Edge Functions, Auth, RLS, triggers), BigQuery, pgvector, pg_cron, Railway, Render, Vercel, REST & GraphQL APIs, webhooks, OAuth, ETL & event pipelines
- **GTM / RevOps:** HubSpot, Close, Day.ai (OAuth 2.0 + MCP), Twenty (GraphQL), Smartlead, Clay, Mixpanel, PostHog, GA4, Google Ads, Google Search Console, Slack
- **AI / LLM:** Anthropic Claude API, OpenRouter, prompt engineering, tool use, RAG & embeddings, vector retrieval, evals & output validation, deterministic scoring vs. LLM judgment
- **Architecture:** Queue-based state machines, event-driven (webhooks + DB triggers), circuit breaker / retry / exponential backoff, dead-letter queues, checkpoint/resume recovery, human-in-the-loop gates

EDUCATION & CERTIFICATIONS

BA, Business Administration - Loyola Marymount University • AWS Certified Cloud Practitioner (2023) • MEDDPICC Masterclass Certification (2023)
