SUMMARY

Sales engineer profile pairing **7+ years carrying enterprise martech and ad-tech quota** with **3 years building production AI infrastructure** for e-commerce and marketplace brands. I'm the technical piece in the sell cycle: I know Amazon and the marketplace ecosystem inside and out — **Amazon Marketing Cloud**, retail media, and multi-marketplace data — and I can stand up the SQL, integrations, and data pipelines that move technical deals to closed-won. I write production Python and TypeScript, build on AMC (custom SQL, audience creation, first-party data onboarding), and architect the systems that connect marketplace data to the CRM and the rest of the stack. My sales DNA means every system maps to pipeline, conversion, and revenue — I've been the BDR, the AE, and the VP, and now I build the tech that helps those teams win.

SELECTED PROOF POINTS

- **Amazon Marketing Cloud:** built custom AMC SQL for reporting and analysis, first-party data onboarding, audience creation, and closed-loop measurement — integrated directly into the client's CRM infrastructure.
- **Marketplace seller intelligence:** multi-source enrichment pipeline (Google Maps → SERP → Apollo → LLM disambiguation) that identified **240,000+ wholesale retailers** across 7 categories — 20x the client's existing base — at 72%+ email-discovery, backed by a 274K-name normalization cache at 95%+ hit rate.
- **7+ years carrying enterprise quota** at Skai (HBO Max \$800K ACV), Crealytics, and Conversion Logic — fluent in BDR, AE, and CRO motions because I've run all three.
- **Technical piece in the sell cycle:** partnered with solutions architects, TAMs, Data Science, and Engineering teams to win and integrate enterprise deals — the sales-engineering role, by another name.
- **Autonomous outbound engine** across 150+ mailboxes — cut campaign launch from ~8 hours to ~3 minutes; ~90% client CAC reduction.
- **Production Python & TypeScript** across 34+ API integration methods with rate limiting, retry logic, and comprehensive failure handling.

PROFESSIONAL EXPERIENCE

Founder & Principal GTM / Sales Engineer

Dec 2022 – Present

Smoothed.io • Los Angeles, CA — GTM & sales-engineering consultancy: production AI infrastructure and marketplace data systems for B2B SaaS and e-commerce.

- **Amazon Marketing Cloud build** for an e-commerce client — stood up custom AMC SQL for reporting and analysis, first-party data onboarding, and audience creation, then integrated AMC with the CRM infrastructure I built so paid, owned, and customer data resolve in one place.
- **Marketplace seller intelligence:** architected a multi-source enrichment pipeline (Google Maps → SERP → Apollo → LLM disambiguation) that surfaced 240,000+ wholesale retailers across 7 target categories — 20x the client's existing base — at 72%+ email-discovery, backed by a 274K-name normalization cache at 95%+ hit rate.
- **Autonomous outbound engine** managing 150+ mailboxes — full pipeline (list build → enrichment → personalization → send → reply handling → CRM sync). Reduced campaign launch from ~8 hours to ~3 minutes; ~90% client CAC reduction.
- **Architecture philosophy:** route expensive LLM calls only where subjective judgment is needed; deterministic logic for routing, scoring, and validation. Separate probabilistic from deterministic processing to de-risk hallucination and cost. No agent grades its own homework.
- **Production API toolkit:** 34+ integration methods (Smartlead, HubSpot, Google Ads, GA4, Supabase, OpenRouter) with rate limiting, retry logic, and error handling — documented in GitHub so client teams can extend.

Contract GTM Engineer

2025

GovSignals • Remote — FedRAMP-authorized AI platform; embedded as sole GTM engineer.

- **Single-operator GTM function** across paid search, analytics infrastructure, programmatic SEO, and content — work typically split across 3–4 agency specialists.
- **Audited Google Ads**, uncovered \$81K in misdirected spend plus a negative-keyword gap blocking core ICP searches; rebuilt campaign architecture from scratch.
- **Executive analytics dashboard** integrating GA4, Google Ads, and Search Console into BigQuery / Looker Studio — single-pane, full-funnel view.

Sales Director

Jun 2020 – Jul 2022

Skai (FKA Kenshoo) • Los Angeles, CA — Enterprise marketing intelligence & retail-media platform across Amazon, Walmart, and major marketplaces.

- **Exceeded quota: 143% Year 1, 111% Year 2.** Managed full-cycle enterprise sales.
- **Closed the company's largest app sale — HBO Max at \$800K ACV** — partnering with solutions architects and TAMs on custom API integrations (the technical sell-cycle role I'd own as a sales engineer).
- **Sold into the marketplace / retail-media shift** as Amazon, Walmart, and others converged on paid-visibility models; managed enterprise compliance (PII, CCPA, GDPR).

Vice President of Sales

Jul 2022 – Feb 2023

Crealytics • Los Angeles, CA — Predictive marketing intelligence & retail-media SSP. (Laid off in company restructuring.)

- **Closed 2 full-service clients** accounting for \$1.45M total revenue in first 5 months.
- **Restructured outbound to an ABM approach — reply rate +157%.** Hired and onboarded BDR.

Enterprise Account Executive / Team Lead, SDRs

Sep 2017 – Jun 2020

Conversion Logic • Los Angeles, CA — Multi-touch attribution & marketing-data platform.

- **Closed 2 accounts in first 60 days (\$390K ARR);** contributed to a 31% increase in total ARR during tenure.
- **Drove enterprise sales partnering with Marketing, Data Science, and Engineering** on attribution-modeling integrations and data-ingestion standards — technical pre-sales partnership.
- **Oversaw 2 SDRs; +67% MQL increase Year 1.**

TECHNICAL STACK

Marketplace & Ad Tech: Amazon Marketing Cloud (AMC SQL, audiences, first-party data), Amazon Ads, retail media, Google Ads (incl. API), GA4, Search Console, SEMrush

Languages: Python, TypeScript, Node.js, SQL

AI / ML: Claude API, OpenRouter (multi-model routing), prompt engineering, RAG pipelines, embeddings, vector retrieval, evals & observability, output validation

Data & Infra: Supabase, PostgreSQL, pgvector, BigQuery, Vercel, Supabase Edge Functions, pg_cron, OAuth / REST APIs, webhooks, database triggers

GTM Stack: HubSpot, Smartlead, Slack, Looker Studio

Tooling: GitHub, Claude Code, Linear, Notion

EDUCATION & CERTIFICATIONS

BA, Business Administration — Loyola Marymount University • **AWS Certified Cloud Practitioner (2023)** • **MEDDPICC Masterclass Certification (2023)**
