SUMMARY

GTM engineer who builds the AI infrastructure that powers modern revenue teams: grounded by 7+ years carrying enterprise SaaS quota. I write production Python and TypeScript, run RAG pipelines on Postgres/pgvector, and ship custom integrations across the GTM stack (HubSpot, Slack, Smartlead, Google Ads, GA4). My sales DNA means every system I build maps to pipeline, conversion, and the messy middle between top-of-funnel and closed-won. I don't assemble no-code stacks - I architect custom systems with evals, observability, circuit breakers, and quality gates that hold up in production.

HIGHLIGHTS

- **Production Python & TypeScript** across 34+ API integration methods (Smartlead, HubSpot, Google Ads, GA4, Supabase, OpenRouter) with rate limiting, retry logic, and failure handling.
- **RAG and embedding infrastructure** on Supabase / Postgres / pgvector - corpus enrichment pipelines (998 lines, 27 passing tests), chunking strategies, retrieval evaluation.
- **Autonomous outbound engine** managing 150+ mailboxes via Smartlead API - reduced campaign launch time from ~8 hours to ~3 minutes; ~90% client CAC reduction.
- **Signals pipeline** (Reddit / HN / Twitter / GitHub scrapers → Supabase Edge Functions, pg_cron) capturing ~1,100 daily signals with automated LLM tiering and lead creation.
- **7+ years carrying enterprise quota** at Skai (HBO Max \$800K ACV), Conversion Logic, and Crealytics - speaks BDR, AE, and CRO fluently because I've been all three.
- **Single-operator velocity**: 11am request → EOD delivery (landing page + Google Ads campaign + ABM target plan).

PROFESSIONAL EXPERIENCE

Founder & Principal GTM Engineer *Dec 2022 – Present*

Smoothed.io Los Angeles, CA

GTM engineering consultancy. Build production AI infrastructure for B2B SaaS and e-commerce clients.

- Architected **autonomous outbound engine** managing **150+ mailboxes** via Smartlead API - full pipeline (list build → enrichment → personalization → send → reply handling → CRM sync). Reduced campaign launch time from ~8 hours to ~3 minutes.
- Built **"The War Machine"** - production programmatic SEO platform connecting Google Ads keyword performance to automated content generation. Closed-loop feedback between paid signals and organic content strategy.
- **Reduced client CAC by ~90%** through multi-source data pipelines with automated qualification, enrichment, and routing into HubSpot.
- Designed **queue-based state machine architecture**: concurrent processing, checkpoint/resume recovery, stall detection, exponential backoff retry. Built so it stays up when I'm asleep.
- Production API integration toolkit: **34+ methods** with rate limiting, retry logic, and comprehensive error handling. Pushed and maintained in GitHub with documentation so others can extend.
- **Architecture philosophy**: route expensive LLM calls only where subjective judgment is needed; deterministic logic for routing, scoring, validation; separate probabilistic from deterministic processing to de-risk hallucination and reduce cost. No agent grades its own homework.

Contract GTM Engineer 2025

GovSignalsRemote

FedRAMP-authorized AI platform for government contractors. Embedded as sole GTM engineer.

- **Single-operator GTM function** across paid search, analytics infrastructure, programmatic SEO, and content strategy - work typically distributed across 3–4 agency specialists.
- Audited Google Ads, uncovered **\$81K in misdirected spend** plus a critical negative keyword blocking core ICP searches. Rebuilt campaign architecture from scratch.
- Built **executive analytics dashboard** integrating GA4, Google Ads, and Google Search Console into BigQuery / Looker Studio - single-pane view of full-funnel performance.

- Built **corpus enrichment pipeline (998 lines, 27 passing tests)** connecting Google Ads keyword data to backend knowledge bases - embedding-based retrieval, chunking strategy, retrieval quality evaluation.
- **Speed proof point:** CRO 11am request → drafted page, campaign setup, and ABM plan delivered EOD.

Sales Director Jun 2020 – Jul 2022

Skai (FKA Kenshoo) Los Angeles, CA

Enterprise predictive marketing intelligence platform.

- **Exceeded quota: 143% Year 1, 111% Year 2.** Managed full-cycle enterprise sales process.
- Closed company's largest app sale: **HBO Max at \$800K ACV.** Partnered with solutions architects and TAMs on custom API integrations.
- Managed enterprise compliance workflows involving PII, CCPA, and GDPR.

Vice President of Sales Jul 2022 – Feb 2023

Crealytics Los Angeles, CA

Predictive marketing intelligence platform and retail media SSP. (Laid off due to company restructuring.)

- Closed 2 full-service clients accounting for **\$1.45M total revenue** in first 5 months.
- Restructured outbound to ABM approach - **reply rate +157%**. Hired and onboarded BDR.

Enterprise Account Executive / Team Lead, SDRs Sep 2017 – Jun 2020

Conversion Logic Los Angeles, CA

Multi-touch attribution and marketing data platform.

- Closed 2 accounts in first 60 days (\$390K ARR); contributed to **31% increase in total ARR** during tenure.
- Drove enterprise sales partnering with Marketing, Data Science, and Engineering on attribution modeling integrations and data ingestion standards.
- Oversaw 2 SDRs; **+67% MQL increase** year 1.

Earlier Roles 2010 – 2017

- **Head of Sales / Founder, Delicious Impressions** (2014–2017): Built alternative OOH media platform within QSR network; \$2M revenue by Year 2; managed 7-person sales team. IP acquired by Sugarmade.
- **Head of Sales, Wagner Bartosch, Inc.** (2010–2014): Patented, scaled, and sold paper product business in QSR space - 20% market share (1,200 stores), 143% MQL growth Year 1, e-commerce platform with 21% reduction in cart abandonment.

TECHNICAL STACK

Languages: Python, TypeScript, Node.js, SQL

AI / ML: Claude API, OpenRouter (multi-model routing), prompt engineering, RAG pipelines, embeddings, vector retrieval, evals & observability, output validation

Vector & DB: Supabase, PostgreSQL, pgvector, BigQuery

Infra: Vercel, Supabase Edge Functions, pg_cron, OAuth / REST APIs, webhooks, database triggers

GTM Stack: HubSpot, Smartlead, Google Ads (incl. API), GA4, Google Search Console, SEMrush, Slack, Looker Studio

Tooling: GitHub, Claude Code, Linear, Notion

EDUCATION & CERTIFICATIONS

BA, Business Administration - Loyola Marymount University • **AWS Certified Cloud Practitioner (2023)** • **MEDDPICC Masterclass Certification (2023)**
